12-year global business-operations leader across payments, cross-border revenue, and platform ops — Seoul-based, on-the-ground in APJ (**4.5 yrs Bangkok, 5 yrs Australia**), bilingual KR/EN native. I have owned the *substance* of revenue operations: created a **₩200M+/month** new revenue stream from zero, run the **full deal cycle for 10+ global B2B partners** (prospect → contract → settlement → review → renewal), and built the analytics-and-reporting cadence under leadership — cutting weekly reporting **48h → 1h (95% ↓)**. Finance degree, SQL-fluent, bias-to-action builder who gets into the weeds and ships.

Profile

12-year global operations leader in **B2B payments, cross-border revenue, and platform operations**. My core is the *substance* of Revenue Strategy & Operations even where my titles read "Overseas Business" or "Operations": **creating and operating revenue streams, owning the end-to-end partner/deal cycle, governing settlement and reconciliation, and building the data-and-reporting layer that sales and finance leadership rely on.**

I work the same cycle every time — **find the root cause → validate with data → prove with a build/PoC → systematize into a repeatable playbook → hand off to run autonomously**. Bachelor of Commerce (Finance) from ANU; I read P&Ls, build the analysis, and translate raw data into decisions. Strong APJ fit: **4.5 years resident in Bangkok** running a 3-country joint venture, **5 years in Australia** (university), now Seoul-based, managing **10 global-language markets** day to day.

Honest scope for this role. My hands-on CRM/data-management platform has been **Zendesk (6+ yrs: data hygiene, macros, triggers, webhooks, reporting)**, not Salesforce; my dashboards were **SQL + custom-built BI**, not Tableau/Looker specifically; and my revenue experience sits on the **partner-economics, settlement, and analytics/reporting** side rather than direct sales-rep quota/comp administration. I map every required competency below to real evidence and flag where the tool is new vs. the capability is proven.

Experience

Toomics Global

2024.06 – Present

Team Lead, BizOps — Global Payments Partners, Settlement & Operations + AI Systems

Lead a 6-person team owning the **global payments partner book, settlement/dispute governance, operational reporting, and an AI operations stack** for a 10-language platform. Reframed an org with *manual 48h reporting + no standards + ad-hoc tooling* into a **partner-governance + standardized-process + data-decisioning** operating model.

- **Partner book & settlement governance — revenue ops core** Own **9 global payment partners** (PayPal · Visa Cybersource · Airwallex · MyCard · WorldPay · Payletter · Paymentwall · Omise, etc.) end to end: contract → **monthly settlement & reconciliation** → chargeback/refund SOP → renewal, consolidated into a single **playbook v1.4**. Ran **14 months / 4,220 dispute cases (~301/mo)** under one governance model with consistent SLA and settlement accuracy. *[TBC: partner renewal rate / settlement accuracy %]*
- **Reporting & dashboards — recurring leadership cadence** Built an automated pipeline from raw source data to **weekly KPI reports**, cutting reporting effort **48h → 1h (95%↓)**; consolidated **58 operational outputs** into one portal. Defined a combined KPI set reviewed **week-over-week**, and ran **quarterly reviews** tracing missed SLAs to root cause and an improvement plan — the QBR/business-review cadence this role prepares materials for. SQL and data visualization hands-on.
- **Analysis → insight → action** Analyzed **6 months of operational data** to find **87% of tickets close on first response**, validating the automation business case; analyzed **18 months / 29,326 records** on a self-built analytics platform to surface trends, risks, and recurring policy/UX friction → clear recommendations, shipped cross-functionally with product, payments, content, and marketing.
- **Systems, hygiene & tool adoption** Designed and shipped **9 operational tools** used daily (dashboard, multilingual engine, ops toolkit, analytics). Standardized "everyone's own rules" into **10 categories + 13 operating scenarios + 143 response templates** with data-management hygiene, a hallucination filter (55 patterns), and a security audit (41 findings, all closed). Drove **full-team adoption in 2 weeks** by piloting with one or two users and folding feedback back in — the change-management/enablement work this role does for sales tools.
- **Bias to action — build to prove** Found the structural problem, validated it with data, then **stood up a working prototype at personal cost** to prove it before pitching leadership for an official project and budget. Pivoted from a customer-facing chatbot to an internal auto-response system once market data showed customers avoid AI chat — same tech, different interface, investment preserved.

NX3 Games

2022.01 – 2023.11

Part Lead, Blockchain Business

Owned **0→1 planning and execution** of a new blockchain-game business: problem definition, cross-functional leadership, partnerships, fundraising, and global launch.

- Rebuilt MMORPG "Rohan M" with NFT/token/P2E mechanics and launched globally (Jan 2023); designed and built multi-channel payment infrastructure (Xsolla in-app, Binance Pay web).
- **Led the Seed round** Built the model and pitched product/financial vision to VCs and strategic partners, **closing the full allocated round** — owning the narrative, the numbers, and the close in front of senior stakeholders.

NHN KCP

2019.11 – 2021.12

Part Lead, Overseas Business

Owned the **full deal cycle for 10+ global payment partners — prospecting → contract → settlement → periodic review → renewal** — and created a new cross-border revenue line from zero.

- **New revenue, 0→1** Designed and launched a USD virtual-account bulk-remittance service, creating a **₩200M+/month recurring new revenue stream**. Defined the problem (overseas-settlement inefficiency), then ran partner negotiation (Payoneer · Uber · Airbnb, etc.), execution, and performance measurement end to end. *[TBC: peak vs. average, month N after launch]*
- **Partner ecosystem & economics** Managed sales, contracts, and operations for **10+ partners** (Visa Cybersource, Tencent, JP Morgan, WorldPay). Analyzed each partner's technical and commercial requirements and designed the optimal solution and economics.

IT Director / Team Lead

Founding member of a 3-party JV (CAT Telecom · SK Telecom · NHN KCP), resident in Bangkok 4.5 years. The SI mandate was to transfer the platform to a self-running local org, so **"an organization that runs without me" was the definition of success.**

- **APJ on-ground + team building** Hired, trained, and grew a local organization of **30 people across 2 countries**, with KPI/SLA and a review cadence designed to run autonomously after I returned to Korea. Direct experience operating across Korea–Thailand–Australia stakeholders.
- **Platform 0→1** Owned the full lifecycle: entity setup, PG platform build, licensing (C3/C5), PCI-DSS and BOT regulatory approvals, and localization — redesigning Korea's 3-party payment model for Thailand's 4-party structure, including settlement flows.

NHN KCP

2014.10 – 2015.06

Account Manager, Overseas Business

- Managed Visa Cybersource and enterprise merchant accounts (OTAs, global fashion brands, digital platforms) as primary owner. Planned and executed Cybersource FDS adoption, lifting monthly overseas-card approvals from **~10,000 to ~80,000 (8×)** via data-driven detection-rule optimization — analytical work that directly protected and grew revenue.

Education

Australian National University Bachelor of Commerce (Major in Finance) · Canberra, Australia 2007 – 2012

Skills & Qualifications — mapped to the role

Languages	Korean (Native), English (Native/Fluent — 5 yrs ANU + 4.5 yrs Bangkok; exec & global-partner decision communication). Seoul-based with full English working proficiency.
Revenue & deal ops	Created ₩200M+/mo new revenue line (0→1) ; owned full deal cycle for 10+ B2B partners (prospect→contract→ settlement/reconciliation →review→renewal); 9-partner dispute/chargeback governance (14 mo / 4,220 cases); partner economics analysis.
Analysis & insights	Finance degree; SQL hands-on ; data pipelines; analyzed 18 mo / 29,326 records; trend/risk/opportunity surfacing → recommendations; revenue-protection rule optimization (8× approval lift).
Reporting & reviews	Automated weekly KPI reporting 48h→1h (95%↓) ; 58 outputs in one portal; week-over-week KPI cadence; quarterly reviews (SLA→root cause→plan); board/VC-grade decks (Seed close).
Systems, CRM & tool ops	Zendesk (6+ yrs) as CRM/data platform — data hygiene, macros, triggers, webhooks, reporting; built 9 ops tools; drove full-team tool adoption in 2 weeks (enablement/change mgmt). [TBC: Salesforce — not yet hands-on; competency proven on Zendesk, fast ramp expected]
BI tooling	Built dashboards from raw data with SQL + custom BI. [TBC: Tableau/Looker — not yet hands-on; dashboard/BI capability proven, fast ramp expected]
APJ region	4.5 yrs Bangkok (3-country JV), 5 yrs Australia, Seoul base, 10-language markets incl. JP/CN — direct familiarity with how APJ markets operate.

Technical (builder)	Python, FastAPI, REST, Claude API (Opus/Sonnet), RAG, prompt engineering, CI/CD, data pipelines.
Military	ROK Army, honorable discharge (Sergeant), 2012.10 – 2014.07.

Why Anthropic *(also drafted for the application's "Why Anthropic?" field, ~300 words)*

I want to do Revenue Strategy & Operations at Anthropic because it sits at the intersection of the three things I've spent twelve years doing — **building and operating revenue, turning messy data into decisions, and doing it across APJ** — for a company whose product I use every day and whose mission I believe in.

I'm not from a polished, mature RevOps function, and that fits an early South Korea team: I find the structural problem, validate it with data, build the proof, systematize it into a playbook, and hand it off to run without me. I **created a ₩200M+/month revenue line from zero**, owned the **full deal cycle for 10+ global partners**, ran **settlement and dispute governance for nine payment partners**, and cut **weekly leadership reporting from 48 hours to one** — the cadence (pipeline hygiene, reconciliation, recurring reporting, QBR prep) this role runs, under different labels.

I'll be direct about the gaps: my CRM has been **Zendesk, not Salesforce**, and my dashboards were SQL and custom BI, not Tableau or Looker. But the competency — CRM data hygiene, building reports and dashboards, troubleshooting for users, driving tool adoption — is proven, and I ramp fast because I build the tools. As an **AI builder myself**, I also understand Anthropic's product from the inside, which matters when the customers I'd support are building on it.

And I fit the region by lived experience: **4.5 years on the ground in Bangkok** running a 3-country joint venture, five years in Australia, now in Seoul. I'm energized by being an early, hands-on member who gets into the weeds and ships — and by helping Anthropic's South Korea revenue engine scale the right way.
